

## 1. Middleware logger

```
PS D:\KULIAH\SEMESTER 5\STUDI INDEPENDEN\Tugas - Backend\ta-express-routing>
Example app listening at http://localhost:3000
middleware logger berjalan
```

## 2. Middleware Post Checker

The image displays two screenshots of the Postman application, illustrating the results of API tests for a collection named 'ta-express-routing'.

**Top Screenshot:** Shows a POST request to `http://localhost:3000/hewan` with a JSON body: `{ "namaHewan": "Meili", "namaSpecies": "ayam" }`. The response is a `400 Bad Request` with a status of `26 ms` and `248 B` of data.

**Bottom Screenshot:** Shows the same POST request, but with a successful response of `200 OK` with a status of `8 ms` and `566 B` of data. The response body is a JSON array: `[ { "id": 3, "nama": "Molly", "species": "kucing" }, { "id": 4, "nama": "Milin" } ]`.
